

DERMATOLOGY CLINIC - PROGRESS NOTE (SYNTHETIC TEST PATIENT, NO PHI)

Patient: Test Patient C Sex: Male Age: 19 Member ID: DEMO-0003

Date of visit: 10/02/2026

Requested medication: Isotretinoin 40 mg oral capsules, 20-week course

Diagnosis: Severe nodulocystic acne with scarring (ICD-10 L70.0)

Chief complaint:

Painful nodules and cysts on the face, chest and back for over 2 years.

History:

The patient used topical tretinoin 0.05% cream nightly and benzoyl peroxide 5% wash daily together with oral doxycycline 100 mg twice daily for 4 months (06/01/2026 - 09/30/2026). There was minimal improvement and new nodules continue to form.

Examination:

Multiple deep inflammatory nodules and cysts on the cheeks, jawline, chest and upper back. Atrophic scarring on both cheeks.

Safety:

Patient and prescriber registered in the iPLEDGE REMS program on 10/02/2026. Baseline lipid panel and liver function tests are normal. Patient is male; pregnancy testing not applicable.

Assessment:

Severe nodulocystic acne with scarring, not responding to 4 months of oral antibiotic plus topical retinoid and benzoyl peroxide.

Plan:

Start isotretinoin 40 mg daily. Request prior authorization.
